Research Interests

Topics

- Regulator behavior in the standard-setting process, real effects of disclosure and financial reporting regulation, and the political economy of finance and accounting

Method

- Empirical (archival data, audio and video data, textual analysis)

Working Papers

- [1] **Quantifying Standard-setting Deliberations** (with Laurence van Lent and Menghan Zhu)
- *Invited for resubmission as a registered report to the Journal of Accounting Research*
 - We develop a publicly accessible, fully indexed dataset using computational linguistics methods to create a verbatim, sentence-by-sentence record of standard-setting board deliberations (e.g., IASB meetings), and construct refined measures to explore key open issues in the political process of accounting standard-setting, such as how ideological is standard-setting and are accounting standard-setters captured by interest groups?
- [2] **Bank Credit Response to Corporate Disclosure Regulation** (solo-authored)
- Using supervisory bank-borrower level data from the German Federal Bank, in this study I investigate how firm-level disclosure regulation influences the banking sector, particularly the equilibrium level of bank credit across different banking groups.

Work in Progress

- [1] **Detecting Directional Shifts in the Standard Setting Process: A Text-based Approach**
- In this study, I use a text-based approach and a fine-tuned LLM to provide quantitative evidence to understanding when, how, and why directional shifts occur in the accounting standard-setting process.

Teaching Experience

- Financial Information & Decision-Making, M.Sc. - level course. *Fall 2022, 2023*
